

@brief Revision control basics
@date 8/30/17
@rel 3

@section Summary
Revision numbering is used throughout the entire product cycle, including conceptualization, prototype, development, productization & release

@section Numbering Schema (numeric)
X.Y.Z
X - Major
Y - Minor
Z - Revision

@section Example
@note In communication the numbering schema used is decided at the time of use, e.g. -
- 'DTECTS 1' targets this market
- 'DTECTS 1.2' enables this feature
- 'DTECTS 1.2.5' fixes this bug

@section Notes
Product Naming is independent of the revision numbering. Revision numbering is primarily an internal tool, and may be used externally when needed.
