```
@brief      Revision control basics
@date       8/30/17
@rel        2
```

@section   Summary
    Revision numbering is used through the entire product cycle, conceptualization, prototype,
    development, productization & release

@section   Numbering Schema (numeric)
    X.Y.Z
        X - Major
        Y - Minor
        Z - Revision

@section   Example
    @note In communication the numbering schema used is decided at the time of use
        - 'DTECTS 1'   targets this market
        - 'DTECTS 1.2'   enables this feature
        - 'DTECTS 1.2.5' fixes this bug

@section   Notes
    Product Naming is independent of the revision numbering. Revision numbering is primarily an
    internal tool, and may be used externally when needed.
